NSO-929 Dreadnaught-class Corvette

Waste Heat Array
(inner surface)

All flaps and folds on this part are valley folds, so that once completed, the printed (ink) side of part 30 is on the INNER surface. Fit this assembly into the completed outer part 29 (see page 6) by sliding it in carefully and matching up edges. Test fit before gluing. Once completed, some trimming may be required.

Last Step

Slide part 31 over the protruding end of part 5 & 6 engine support, after the rest of the engine and waste heat array assembly is complete and in place.
